## "CONVERSION THERAPIES" IN THE WORLD

### DEFINING "CONVERSION THERAPIES"

**Purpose:** to change a person's sexual orientation or gender identity from homosexuality to heterosexuality and from transidentity to cisidentity. This reasoning implies the perception of homosexuality and transidentity as diseases that should be cured.

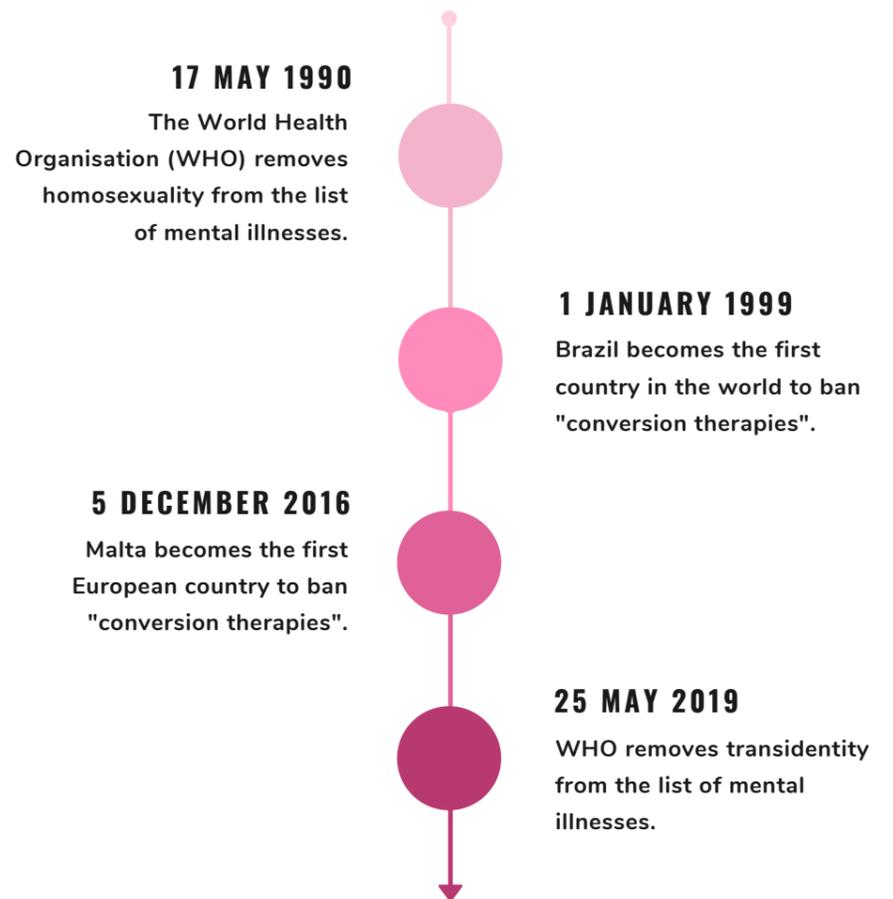

### QUANTIFYING "CONVERSION THERAPIES"

Very **difficult** to quantify, as very few studies exist.

Most of the studies concern the **United States**, where the phenomenon is not as hidden as in countries like France.

The fact that there is no **crime of "conversion therapy"** in the vast majority of countries contributes to this difficulty in quantifying the phenomenon, since **no complaint** and therefore no court decision can be filed and rendered on this account.
